### **Line Item JIT Specifications**

Based on the purchase order class code, the purchase order entry routines will, optionally, request exact delivery locations and delivery times.

The delivery location can be predefined in purchasing address definitions, which include a description of the exact delivery location.

Through the vendor workbench, the vendor has the ability to generate a shipment from their point of view, and a purchasing receipt from the user's point of view. This function would provide the ability to generate an accounts payable payment to be available when the physical receipt of the material is made.
